

ARTREGISTER

Fåglar i Norrbotten 1982-1996

Måtsättningen har varit att ange samtliga sidor i samtliga artiklar, notiser, etc. där en fågelart nämns. Arter nämnda i rapportmallar, resor utanför Norrbottens och Västerbottens län, artnamn i litteraturbeskrivningar/recensioner, dikter och upprop är inte medtagna, om det inte bedömts ha intresse för den norrbottniska fågelfaunan. Viss litteratur berör just Norrbotten och de recensionerna har tagits med.

En art kan förekomma på fler än ett ställe i texten på angiven sida. Läs hela sidan. Innehåller bildtexten eller bilden uppgifter om arten finns det med i registret.

Understruken sidnummer betyder en artikel som rör en specifik art, t.ex. en artbeskrivning eller en projektrapport.

Raser som inte avser den i Norrbotten förekommande rasen hos t.ex. gulärta, gråiska, gransångare, ärtsångare har egna sidangivelser för att inte försvinna bland alla siduppgifter på vår egen ras. Detsamma gäller t.ex. vitstjärnig blånake och mellanskarv. Sibirisk nötväcka och smalnäbbad nötkråka däremot sökes under nötväcka respektive nötkråka. Det är än så länge bara de östliga varianterna som ses hos oss. För t.ex. obestämd korsnäbb, sökes under just "obestämd korsnäbb".

Kort förklaring

Siffror i fetstil (**1:1**) anger vilken åtgång och vilket nummer av FiN som avses. Siffror med vanligt stil, t.ex. 8-10 anger sidnumren.

1:1/5, 8-10 betyder åtgång 1, nummer 1, sidan 5, samt sidorna 8-10 (arten nämns på samtliga tre sidor i intervallet 8-10).

1:1/5, **2:1/8** betyder åtgång 1, nummer 1, sidan 5, samt åtgång 2, nummer 1, sidan 8. Åttan är understruken vilket betyder att där behandlas arten utförligt.
